## GIROLIVO

### 320 B.L.

# Girolivo 320-9 B.L.

## Special for olive groves

### DESCRIPTION:

The Girolivo rake by BORELLO is a specific tool for olive groves. It permits to form a swath in the centre of the tree row with the branches cut for pruning and makes cleaning easier, especially if you are using a branch cutter. Girolivo by BORELLO permits to form a swath in a variable width. The hydraulic side shift obtained with a double-acting cylinder makes entering and leaving the tree rows easier and improves manoeuvring in the grove. The adjustable central dampener absorbs the efforts and make the operator's work easier. The elasticity of spring tines allows to work in any kind of orchard and ground. The gearbox in oil bath is maintenance free. Furthermore Girolivo by BORELLO offers an optional equipment for read circulation. Just remove the rim and the arms and rest them on their supports.

### MAIN FEATURES:

- Gearbox in oil bath with 9 arms
- 3 spring tines per arm
- Working diameter 320 cm. Working diameter reduced to 240 cm UPON REQUEST
- P.T.O.: 540 rpm
- Two PTO shafts with central joint and clutch
- 2 pivoting wheels with tires 15x6.00-6
- Height adjustable with a crank
- Three-point hitch to tractor
- Hydraulic side shift
- Weight 330 kgs
- Required power Hp/Kw 50/36
